

Wall Formwork

- High Concrete Pressures - Minima is suitable for concrete pressures up to 60kN/m² for single tier and 55kN/m² for height extended forms.
- Wide range of panel sizes - With three height sizes, five panel widths and over 25 different panel sizes, Minima can be adopted in almost every project.
- Hinged corners - providing flexibility of design for greater internal and external corner angles.
- Clamps - Designed for quick and easy connection of panel both parallel and at right angles.
- RMD Kwikform Scaffold tube and fitting can be used as handrails when necessary.

Column Formwork

- High Concrete Pressures - The use of MP Column panel allows 600 x 600mm Column forms up to 4.5m high to be formed without loss of the maximum 90kN/m² design pressure.
- External Corners - External corners are used to join the external corners of the column formwork at right angles, in order to use the full face of the standard Minima panel to produce 700 x 700mm columns.
- Lightweight - Minima column forms can be installed, dismantled and relocated without the use of a crane.
- Fast - The modular nature of Minima ensures it is fast to erect and dismantle.
